

Local Water Tests for Aluminum – Chico, California Area

Introduction

All tested water was collected in a clean glass jar and taken immediately to Basic Laboratory, a CA state certified lab, headquartered in Redding, with an office in Chico. All analyses are performed under strict adherence to the established Quality Assurance Plan. We have taken samples of rainfall, as well as from standing water in lakes, ponds, reservoirs, and other water sources. The first sample was collected on 10/19/2010 and the latest was collected on 7/11/2012.

Maximum Contaminant Level (MCL)

Free aluminum ((nano-) particulate) is a toxic metal. The MCL is established by the Environmental Protection Agency (EPA). When the MCL is exceeded, the CA EPA is legally required to mitigate the problem. The MCL for aluminum is **1,000 parts per billion (ppb)**.

All environmental samples should be less than 1 part per billion nominal. See chart on reverse for graphic comparison.

Regardless of the source of the aluminum/metal contamination, this is a severe public health hazard that must be addressed!

Tested Samples

Date	Type and Location	Result
A. 10/19/2010	Rainwater from a private residence on Coyote Way, in Stilson Canyon, east of Chico, following a month of heavy aerosol spraying	384 ppb
B. 11/19/2010	Rainwater collected from Coyote Way during a storm following much less spraying than October sample	229 ppb
C. 12/27/2010	Sample taken from Horseshoe Lake in Upper Bidwell Park, near the shore in very shallow water approx. 12" below the surface	7,380 ppb
D. 2/18/2011	Second sample from Horseshoe Lake, taken from end of pier and approximately 2 ½ feet below surface	5,540 ppb
E. 2/18/2011	Sample from California Park Lake near the north shore 6" below the surface	736 ppb
F. 2/18/2011	Sample from California Park small 'Duck Pond'	4,770 ppb
G. 4/25/2011	Lake Oroville (Nelson Bar), a tributary on the north side of the lake – sampled 3' from shore and 2' below the surface	61.2 ppb
H. 4/25/2011	Sample from Paradise Reservoir east shore	35.3 ppb
I. 4/25/2011	Well water (unfiltered) from Coyote Way	12.2 ppb
J. 4/25/2011	Chico city tap water, private residence, East Lassen Ave.	6.0 ppb
K. 10/11/2011	Rainwater from Coyote Way collected during first rain of season after a week of aerosol spraying	129 ppb
L. 7/11/2012	Horseshoe Lake after "Brown Rain" event	18,500 ppb
M. 7/11/2012	California Park small 'Duck Pond' after "Brown Rain" event	9,730 ppb
N. 7/11/2012	California Park Lake after "Brown Rain" event	719 ppb
O. 6/07/2012	Collected from Holt Ln. Solar Panels rinsed with well water	52,000 ppb
P. 6/07/2012	Holt Ln. Solar Panels sample Barium and Strontium levels	Ba 480 ppb Sr 413 ppb

These are not natural skies – they are 'man-made' via aerosol spraying – they are not jet "contrails" (condensation trails)

Governments and corporations are deliberately manipulating and altering Earth's climate, endangering the lives of people all over the world. One of the most extreme cases of **geo-engineering** is **aerosol spray trails** ("chemtrails") — the purposeful release of toxic aerosol-sprayed chemicals into the air that are poisoning people and the planet. These projects represent some of the worst crimes in history, yet most people are unaware of them.

Over one hundred patents have been granted to major corporations, including Monsanto, for aerosol spraying of materials that can penetrate your lungs and blood (and the blood-brain barrier), cause disease, disrupt your mental capacity, cause you to be sterile, and even cause premature death. These materials are being sprayed all over our planet — and on you — right now, on an almost daily basis, without your knowledge or consent.

An article from the National Institutes of Health (NIH) confirms that not only are chemtrails real, but they are suspected to be responsible for a variety of neurotoxic conditions, including Multiple Sclerosis (MS).

Intense spraying of dangerous chemicals from planes has been reported all over the world, in (at least) the U.S., Canada, Germany, England, Australia, Mexico, South Africa, The Bahamas, and Puerto Rico. A toxic mixture of parasites, pathogens, heavy metals, and nano-engineered particles have been found falling to earth from trails of certain planes. Aluminum, barium, bacillus spores, radioactive thorium, cadmium, chromium, nickel, desiccated blood, mold spores, yellow mycotoxins, ethylene dibromide, and synthetic nano-fibers are among the ingredients found in collected samples. As these fill the atmosphere and lodge in our lungs and blood streams through the air we breathe and the food we eat, it represents the most unavoidable toxic pollution in history.

In some areas, aluminum levels in the soil are so elevated, causing a change in the soil's *pH* level, that certain trees and crops are struggling to survive, and it is causing disease and massive die-offs. Interestingly, the USDA, which receives royalties on GMO crops, was recently granted a patent for seeds that can grow in soil with high aluminum content.

There are thousands of photos of aerosol sprayed chemtrails from around the world, ground-based videos of spraying and the unnatural, man-made cloud after-effects, and even a video shot from above a plane while it was turning its sprayers on and off. People are finally starting to notice and wake up to this horrific reality.

See reverse for additional information about the sources for this chart.
