Established by the California EPA, **Maximum Contamination Levels** of aluminum (MCL) should not exceed 1,000 ppb. (which some think is too high of a toxic maximum) For more information about the 2010-2013 chart below, visit the ChicoSkyWatch.org website.

How Do You LIKE YOUR SKIES?

Natural...

WHAT PARTLY CLOUDY USED TO LOOK LIKE

...or Man-Made?

WHAT PARTLY CLOUDY LOOKS LIKE NOW

Sub-Stratospheric
Aerosol GeoEngineering

How It Affects You

True jet contrails are rare, like rainbows.

The lines in the sky you see almost every day are not jet contrails

- Jet contrails form *above* the troposphere, in the stratosphere, above ~30,000 feet (6 miles).
- Jet condensation trails form at -70° F and 70% humidity, are usually short-lived, and dissipate behind the jet after a few seconds, seeming to follow along behind the jet across the sky.
- Jet contrails cannot form in the sub-stratospheric troposphere, where we live and breathe.
- Occasionally, when a true contrail “persists”, it does so only briefly, and will dissipate in a matter of minutes, never spreading out into a 'cloud'.
- The lines we see in the sky almost every day are **not** jet contrails. They are low-altitude, sub-stratospheric aerosol geoengineering spray trails (SSAGtrails). They are sometimes referred to as “chemtrails”, and erroneously called “persistent contrails” by some.
- The aerosols are sprayed from unmarked aircraft as part of SSAG programs.
- These spray trails “persist” and then spread out horizontally across the sky to form unnatural cloud cover and a white haze over the sky.
- SSAGtrails cause global dimming and comprise toxic metals, other chemicals, and biological agents.
- Aluminum content in multiple water sources has become **so** prevalent and widespread, there **must** be a **new**, common, large-scale contamination source.

Aerosol Components

- Laboratory testing has shown unnatural, very high aluminum content in **Chico-area** water sources, including rain and standing water (ponds, lakes), and highly-toxic barium and strontium. (see flyer back)
- From public information held in the U.S. Patent Office, we know the aerosols are chiefly aluminum oxide particulate as a common ingredient.
- Spray trails also contain barium, thorium, and strontium. (and possible nano-particle aluminum)
- Biological agents have also been reported, including viruses, bacteria, fungi, and other biologicals.
- These components, and other sprayed chemicals, like diethylene bromide (rainbow patches in aerosol clouds), are toxic, and we breathe them in every day.

Where is this happening?

- Spraying has been reported from all across the United States (incl. Alaska, Hawaii & Puerto Rico), Canada, Mexico, Europe, Australasia, the Middle East, South Africa, South America, and Asia (north/east).

Conspiracy Theory?

- Conspiracy? Yes. (one or more people are involved)
- Theory? Yes and No. (some facts and evidence known)
- People must remind themselves that so-called “conspiracy theories,” both criminal and 'benign,' happen every day, all day long, all around the world.
- In our legal system we have: Conspiracy to Commit Murder or Fraud, General Conspiracy, & the RICO Statutes. Do not fall into the trap of irrationally dismissing something as a “conspiracy theory” without first investigating the facts.

What you can do!

Visit the **Chico Sky Watch** website for more information, links to other websites, and to learn what you can do to help stop this toxic atrocity against the people of the world and our environment.

Spread the word!

Chico Sky Watch

Chico Poison Skies Alert!

Why are they spraying?

There are several confirmed and theorized agendas.

- NASA and NOAA, who both admit to spraying projects, claim it is to reduce incoming sunlight (SRM – Solar Radiation Management) to slow global warming and/or for climate change remediation.
- Weather modification. (other, additional to above)
- Weather warfare. (see military report, “Weather as a Force Multiplier: Owning the Weather in 2025”)
- Possible HAARP facilities association. (High Frequency Active Auroral Research Program; ionospheric heating, weather modification and warfare, scientific research)
- There is speculation that human health is being targeted. (population control, illness, death, sterility)

Effects and Results of spraying

- It is believed that, due to increased aluminum particulate contact, absorption, and toxicity, through water and the air we breathe, there has been a marked increase in Alzheimer's, autism, asthma and other respiratory diseases, fungal and bacterial infections, and other severe health effects for humans.
- Trees and crops suffer from reduced sunlight (20% less), molds and fungi flourish, and the soil pH is becoming more alkaline. This affects crop yields, impacts forests, and reduces the resistance to disease and ability for all plants to grow in once-healthy soil.
